OBJECTIVE:

An accomplished Full-Stack Developer specializing in the dynamic MERN (MongoDB, Express.js, React, Node.js) stack, enriched with TypeScript and Next.js. With a strong background in both frontend and backend technologies, I bring a holistic approach to web development.

Projects:

Bank App

- Developed a secure and scalable full-stack bank application.
- Implemented distinct dashboards for Admin, Staff/Banker, and Customer roles.
- Admin features include overseeing staff/customer activities and managing accounts.
- Staff/Banker functionalities encompass awarding account numbers and initiating deposits.
- Customer capabilities involve signing up after receiving an account number, making deposits, and initiating fee-charged transfers.
- Ensured user authentication using bcrypt and implemented data protection measures.
- Architected the application using the MongoDB database, emphasizing a responsive user interface.

Blog Website

- Designed and implemented a blog website with user authentication.
- Developed features for creating blog posts with titles, bodies, and image uploads using Cloudinary.
- Ensured a seamless and secure user experience through login and signup functionalities.

CRUD APP

- Created a robust CRUD application with user management.
- Implemented features for creating, updating, reading, and deleting user data.

EDUCATION

SECONDARY SCHOOL

Loyola College Nigeria

2014- 2020

CORE SKILLS

- Languages: JavaScript
- Frameworks: NodeJS, ExpressJS
- Databases: MongoDB
- APIs: REST
- Tools: Git, Cloudinary, Postman, GitHub,

Professional Experience:

Backend Developer Intern | CapacityBay, Remote | August 2023 - present

- Collaborated with a dynamic team at CapacityBay, a US-based company specializing in software development solutions.
- Contributed to the development of backend systems using a clean architecture approach, ensuring scalability, maintainability, and efficiency in the software.
- Worked on Blog Service Web App, leveraging NodeJS, ExpressJS, and MongoDB to implement robust and scalable solutions.
- Collaborated closely with senior developers to understand and implement best practices in backend development, gaining valuable insights into the software development lifecycle.
- Participated in code reviews, debugging, and testing processes to deliver high-quality, error-free code.
- Engaged in problem-solving sessions and actively contributed to the overall improvement of the development workflow.
